

California Killer Whale Project

Field Guide

Third Edition

© 2026 California Killer Whale Project

Introduction

California Killer Whale Project (CKWP) is a nonprofit group committed to continuing the long-term study of the ecology, natural history, and conservation of killer whales off the coast of California.

We have archived killer whale sighting reports back to the 1950s and have been collecting killer whale data in the field off California since the late 1970s with a special emphasis on Bigg's (Transient) killer whales, *Orcinus orca rectipinnus*. We have also collected data on the Offshore ecotype of killer whales since 1992, Resident killer whales, *Orcinus orca ater* (specifically K and L pods of the endangered Southern Resident killer whales) since 2000, and the Eastern Tropical Pacific (ETP) population subset with researchers since 1982.

Our first killer whale photo-identification catalog was published by the National Oceanic and Atmospheric Administration (NOAA), titled: Killer Whales of California and Western Mexico: A Catalog of Photo-Identified Individuals (NOAA-TM-NMFS-SWFSC-247), September 1997. Nancy A. Black, Alisa Schulman-Janiger, Richard L. Ternullo, Mercedes Guerrero-Ruiz. This 2026 Field Guide is an updated and extended version of our limited 2023 Field Guide. While other killer whales exist in California waters, this guide displays most recently documented Bigg's killer whales and their well-documented descendants.

Introduction (cont.)

Our focus for this document is to bring awareness to some of the more frequently sighted Bigg's killer whales in California and to provide a photo-identification tool for researchers and the general public. This work is possible due to the California Killer Whale Project's 40+ years of detailed observations and data that has been shared.

This Field Guide features 271 individuals from multiple matriline, along with some of their closest associates. We have arranged this Field Guide primarily in order of their individual ID designations. We hope that this Field Guide will be used by members of the public as a helpful resource to aid with killer whale identification and to encourage observers to report sighting information to support our ongoing research efforts. We hope this resource will help you better understand and love the killer whales that we are trying so hard to protect!

If you see killer whales anywhere along California, please send us photos and encounter details to californiakillerwhaleproject@gmail.com or submit via our website at www.californiakillerwhaleproject.org.

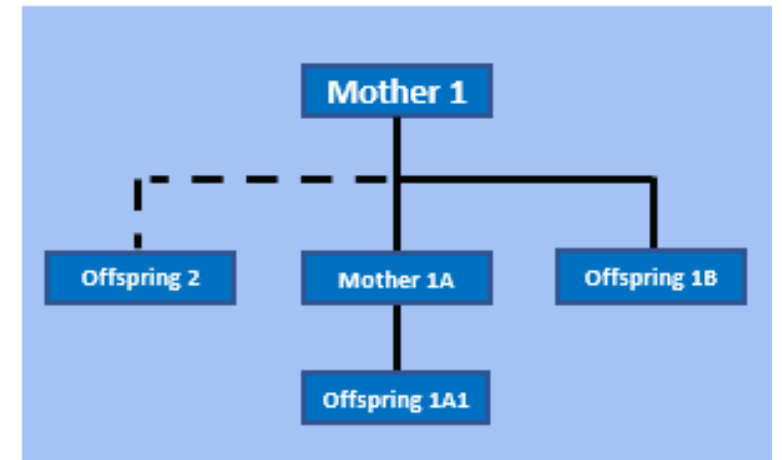

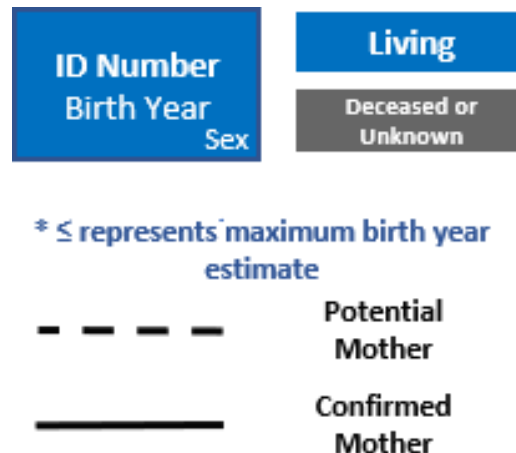

Legend

Each killer whale is given a unique number preceded by “CA” for California. These are based on our original 1997 designations and have been expanded upon since. As with the whales that have been seen in British Columbia and have been given T-Designations, each offspring of a matriarch is designated by their mother's identification number followed by the letters A, B, C, and so on. Some individuals are given nicknames based on their personality traits, appearance, or other affiliations. We identify killer whales using perpendicular dorsal fin photos showing the left and right sides of the saddle patch and eyepatches. Killer whales thought to be alive are labeled in blue, killer whales thought to be deceased or of unknown status are labeled in dark gray. Some individuals were first encountered as adults; therefore their precise birth year is unknown. Individuals first recorded as mature were assumed to be at least 10 years old for females and 20 for males, and an inferred mother of an adult male was assumed to be at least 10 years older than her son because females can give

Legend (cont.)

birth as early as age 10. For each of these individuals, we have conservatively estimated their maximum year of birth (as denoted by a $\leq$ symbol). Within a matrilineal tree, known mothers and their offspring are indicated by a solid line between the female and her offspring. A broken line connecting a female and a younger individual indicates that there is evidence of a potential maternal relationship, but it is unconfirmed. In cases where a matriline or individual associates extensively with one or more individuals, those associates are denoted in the “Closely associates with,” or for more rare individuals “Has been seen associating with” sections.

† : Deceased or Unknown

Acknowledgements

Our work would not be possible without the pioneering photo ID efforts of the late Michael Bigg who pioneered the nomenclature we still use today. Thank you to the countless photo contributors along the west coast of the U.S. and Canada. This work would not be possible without community scientists, whale watching captains and naturalists, fisherman, and many research organizations that continue to contribute photos and encounter data with us. We would also like to thank our scientific advisors, Jared Towers (Fisheries and Oceans Canada [DFO] and Bay Cetology) and the late Ken Balcomb (Center for Whale Research) for their guidance and support.

A special thank you to Monterey Bay Whale Watch for hosting our scientists. We give thanks to the Center for Whale Research (CWR) and the National Oceanic and Atmospheric Administration (NOAA) for their commitment to collaboration and for sharing photos taken under research permit with our team. We also want to thank and acknowledge Finwave, an open-access database that has contributed photos to this guide and has been instrumental in confirming IDs off California, and in various areas in Oregon, Washington, and Canada.

CKWP Webpage Designer: Cristal Cardenas

Photo Editor: Dane McDermott, Jane Wilson, Morgan Quimby

Videographer/Photographer: Connor Foley and Evan Brodsky

Photo Credit

We would like to extend our heartfelt thanks to everyone who has provided identification photos for our 2026 Killer Whale Field Guide. Contributions like yours have helped us develop an accurate and informative resource for the public. Our work would not be possible without your efforts. We appreciate your support and your participation in our community!
